Clear Run

Pipeline stages: decomposition → mapping → state → branches → interaction → expansion → prose → audit

OpenRouter router. Default model: openrouter/free. Free-model availability and limits can change.

Ready.

Cast & Transformation States

Use as many character slots as the scene needs. A character can be paired with a transformation state, so one person can behave differently without becoming a different character.

Character Slot 1: Pre-Glamor Rainee

Rainee · State 1 · Glamor Girl

Remove

Character Slot 2: Post-Dump Rainee

Rainee · State 2 · Ultra-Luxury Diaper Gir

Remove

Character Slot 3: Noir

Base character state

Remove

Character Slot 4: Invented Minor Character

Base character state

Remove

+ Add character slot

+ Add character profile

Pre-Glamor Rainee
Character 1 / original adult state
merchant-kitsune; socially confident; easygoing; playful; flirtatious; clever; comfortable teasing; dislikes tedious bureaucracy; emotionally perceptive; can become serious when stakes matter

Post-Dump Rainee
Character 2 / simplified toddler-state after diaper incident
same underlying Rainee filtered through infant body, simplified cognition and cartoon escalation; grandiose dignity; immediate comfort; merchant logic applied to absurd childcare problems

Noir
outsider teaser / relationship foil
dry, concise, observant, playful; notices contradictions; does not over-explain jokes; lets Rainee create her own embarrassment

Invented Minor Character
scene-local service/customer/bystander
created only when a function requires an external witness, service provider, customer or obstacle

Data Library

Import JSON packets containing episode anchors, transcript chunks, behavior schemas, character profiles, transformation states, or writing-style examples. Imported packets can be enabled/disabled for the next run. One JSON file can contain one entry, an **entries** array, or a dataset object.

2 data entries · **2** enabled for AI runs

post-dump toddler state

Add Episode Transcript

ChatGPT does the conversion. Give it the transcript, have ChatGPT return the Episode JSON, then upload that JSON here. Choose the character or transformation state that should receive the evidence. Existing episode data is extended, not erased.

Add Episode Transcript to Character: Select a character...

Optional Transformation State: No specific state

Episode JSON
Upload the JSON produced by ChatGPT. It can contain one episode, an `episodes` array, an `episodeAnchors` array, or an episode with `transcriptChunks`.

+ Add Episode JSON | JSON Template

No episode JSON imported yet.

0 episode anchors · **0** transcript packets

No episode anchors yet. Upload an Episode JSON to begin.

Behavior Operators

Status-Scale Mismatch

Status-Scale Mismatch
trigger: tiny bodily/childish problem
Mechanism: target treats a trivial infant problem as a major adult crisis
Escalation: minor inconvenience → dignity threat → strategic response

+ Add operator

Scene Expansion

Permit internal monologue

Permit physical transformation / cartoon-physics beats

Permit merchant/investor cooking

Source Scene

Paste a short scene, transcript excerpt, or detailed summary. The engine extracts behavior and comedic functions rather than copying wording.

Adaptation instruction

```
Adapt this Family Guy-style beat architecture to Rainee and Noir. Character 1 is Pre-Glamor Rainee / Rangiku scheme at the beginning.
Character 2 is Post-Dump Rainee after the diaper incident and mental simplification. Preserve the source comedic functions, but invent new
dialogue, actions, and consequences. Never mention Stewie, Brian, Rangiku, Family Guy, or any inspiration name inside the story. Noir should
be the outsider teaser who reacts to Rainee's behavior rather than narrating the reference.
```

Evidence & Behavioral Memory

Evidence | Profiles | Beats | State | Branches | Interaction | Expansion | Prompt | Debug

Evidence hierarchy
1. Canon/source scene supplied by user
2. Research-derived behavioral facts
3. User-defined character schema
4. Generated adaptation hypotheses

▾ Stewie / Family Guy behavioral evidence

- Sophisticated, highly literate toddler who behaves with adult-like vocabulary and attitude while remaining vulnerable to infant limitations.
- The character combines grandiose adult reasoning with childish misunderstandings and physical helplessness.
- Early characterization emphasized megalomania and schemes; later characterization became more eccentric, friendly, flamboyant and relationship-driven.
- Toddler problems can be treated as major strategic problems, producing a scale mismatch between the seriousness of the response and the triviality of the trigger.
- Diaper/toilet situations can become social-status jokes: the same object means different things depending on who is wearing it.
- The Brian relationship provides a useful foil: one character presses, protests or observes while the other rationalizes, escalates and sometimes turns the situation into a test of the relationship.
- The 'Brian & Stewie' bank-vault sequence demonstrates a useful long-form structure: confinement → bodily problem → failed solution search → increasingly absurd proposal → disgust/anger → deeper relationship conflict.
- Stewie's head is canonically associated with an American-football/rugby-ball shape, making exaggerated head geometry a usable visual transformation beat in this adaptation.
- Cartoon physics allow the physical consequence to become an additional joke rather than merely a realistic symptom.
- The character can alternate between extreme confidence and genuine infant vulnerability, creating a status-collapse / status-recovery rhythm.

Episode/function anchors

- **Brian & Stewie** · Family Guy S8E17
  extended relationship pressure; diaper problem becomes a catalyst for escalation and emotional conflict
- **Bill & Peter's Bogus Journey** · Family Guy S6-era episode
  diaper status inversion: infant diaper is normalized while an adult/dog wearing one becomes socially absurd
- **Stuck Together, Torn Apart** · Family Guy S3E19
  forced proximity; practical diaper-care problem becomes a recurring obstacle
- **Emission Impossible** · Family Guy S3E11
  infant bodily limitation used as comedy against the character's adult-like self-image
- **A Very Special Family Guy Freakin' Christmas** · Family Guy S3E16
  Stewie's formal speech and service-demanding behavior can collide with ordinary family routines
- **The King Is Dead / early Stewie material** · early-series characterization
  grandiosity and adult diction contrasted with infant body and household dependence
